

Regal Components

Environmental policy

Environmental awareness – part of our business and values.

Regal Components shall participate and be engaged for a long-term and sustainable environmental perspective. The company and employees have a joint responsibility to actively contribute to the improvement of the company's environmental performance and to minimize our negative environmental impact.

Our product development, production and trade of components contribute to more efficient machines and vehicles, hence contributing to lower energy consumption and fossil fuel reduction.

Our operation shall utilize energy and materials in an efficient manner to minimize waste. Most waste material are recycled and creates resources used by others.

A life cycle perspective is the basis of our environmental performance in product development, with a holistic approach from acquisition of raw materials to production, transportations and end-of-life recycle.

We shall comply with current environmental legislations, stakeholder and internal requirements that concerns our business.

We expect our business partners to continuously improve their environmental performance, we set requirements and conduct structured partner reviews and risk assessments.

Routines in our management system, such as monthly meetings, continual improvement and deviations processes enable improvements and enforcement.

Our environmental performance is reviewed annually and both quantitative and qualitative KPI's are measured and verified against set environmental goals.
